

# Sophos Mobile

## Improve Productivity with Simpler Endpoint Management

Sophos Mobile is a Unified Endpoint Management (UEM) solution that helps businesses spend less time and effort to manage and secure traditional and mobile endpoints. The only UEM solution that integrates natively with a leading next-gen endpoint security platform, Sophos Mobile manages and secures Windows 10, macOS, iOS, and Android devices.

### Highlights

- ▶ Complete UEM solution
- ▶ Manage iOS, Android, and Windows Mobile devices
- ▶ Manage Windows 10 and macOS computers
- ▶ Deploy hosted with Sophos Central or install on premises
- ▶ Sophos Container for email, documents, and web content
- ▶ Manage and configure Microsoft Office 365 apps on iOS and Android devices
- ▶ Container-only Management for frictionless BYOD
- ▶ Extensive support for Android enterprise
- ▶ Flexible self-service portal
- ▶ Award-winning Mobile Security for Android

### Secure Unified Endpoint Management

Manage and secure corporate-owned or personal Windows 10, macOS, and mobile endpoints in one system to ensure a simpler management strategy, ensuring uniform company security policies and secure access to company assets. For maximum productivity, organizations where BYOD is embraced can apply consistent policies regardless of device type or ownership. And, because everything we do at Sophos is about security, Sophos Mobile will keep business data, users, endpoints and mobile devices protected and secure.

### Modern Management with Sophos Security

Establish a first line of defense at the mobile device level with top-ranked mobile AV technology and web protection in the Sophos Mobile Security app. Enforce company policies with compliance checks that will automatically restrict access to business resources or initiate remediating actions in case of violations. For additional security, Sophos Mobile integrates natively with the leading next-gen endpoint protection solution in Sophos Central.

### Keep business data protected and personal data private

Keeping business data protected and secure on personal or company-owned mobile devices is critical. To make sure that business data is safe and personal information is private, Sophos Mobile comes with a container for email and documents that can be deployed either with or without management of the device itself. Container-only Management gives admins control over corporate content without intruding on the users' privacy, ideal in BYOD scenarios.

### Remote configuration and setup

Spend less time managing and securing traditional and mobile endpoints for increased productivity, and rest easier knowing that the associated risks are reduced. Configure BYOD or corporate-owned Windows 10, macOS, iOS, or Android endpoints remotely with a powerful selection of policies, profiles, and configuration options. Reduce your help desk calls by helping your users help themselves with the flexible self-service portal, entirely without IT involvement.

## Sophos Mobile Unified Endpoint Management

### Devices

- ▶ iOS, Android, Windows 10, macOS
- ▶ Configuration and policies
- ▶ Inventory and asset management
- ▶ Reporting

### Apps

- ▶ Install, remove, view apps
- ▶ Enterprise app store
- ▶ App control, whitelist/blacklist
- ▶ Manage and configure Office 365 apps

### Content

- ▶ Email and document container
- ▶ Publish content
- ▶ Container-only Management
- ▶ Native OS containerization

### Security

- ▶ Compliance rules and remediation
- ▶ Stop malware, ransomware, and PUAs
- ▶ Anti-phishing
- ▶ Web protection, web filtering

### Productivity - Let your users work on any device they want

Sophos Mobile enables companies to improve productivity by letting employees use mobile devices for work securely. A wide range of security and management capabilities ensures that company data is secure, for example by configuring access to business information and email on personal or business-owned mobile devices.

### Security – For users, data, and devices

Sophos Mobile is the only Unified Endpoint Management product that integrates natively with a leading next-gen endpoint security platform, protecting users on traditional and mobile endpoints. Keep business email and documents on mobile devices in containers, making sure that access to company data is controlled and secure, even for users with personal devices that can have access to business information without intrusions upon their privacy. Leading anti-malware and web protection technology protects users from malicious apps or websites.

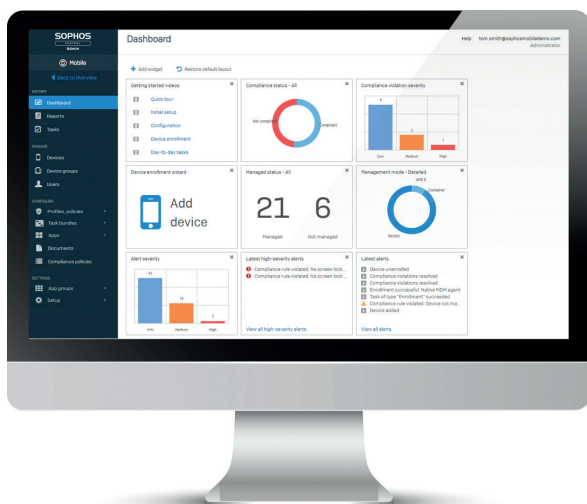

### Simplicity – Easy to configure, manage, and maintain

Sophos Mobile lets you get started in minutes as a hosted solution in Sophos Central, or you can choose to install on your own premises, whichever suits the needs of the business. The intuitive admin workflow together with the flexible self-service portal means your admins will spend less time on the day-to-day tasks of securing and managing traditional and mobile endpoints, leading to a lower total cost of ownership.

Sophos Mobile can also be used to manage and configure the Microsoft Office 365 apps on mobile devices. Admins will save time by using a single console, making policy creation and distribution simple in the Sophos Mobile admin interface.

### Value – Secure your mobile devices affordably

Sophos Mobile is licensed per user and delivers great value, enabling companies to manage and secure the devices of the whole organization without overspending on underutilized features.

### Powerful Containers

Ensure sensitive company information on mobile devices stays safe and separated from personal data on the device with the secure and AES-256 encrypted Sophos Container. Easy-to-use apps for iOS and Android let users access containerized content: **Sophos Secure Email** for email, contacts, and calendars, and **Sophos Secure Workspace** for documents and corporate web browsing. The Sophos Container saves you time with effortless email and data-access configuration, and it protects your users from malicious links in documents and content with anti-phishing technology. You can even restrict access to the container based on time, Wi-Fi, or geo-location.

Additionally, you can take advantage of native OS containerization features like Android enterprise (Android for Work), iOS, and Samsung Knox.

### Manage mobile content without managing devices

Container-only Management gives admins control of corporate content in the Sophos Secure Workspace and Sophos Secure Email apps without requiring management of the mobile device itself. This is ideal in Bring Your Own Device (BYOD) scenarios, when corporate email and data can be protected and controlled without intruding on the users' privacy.

#### Sophos Secure Email

Sophos Secure Email is a fully-featured, secure, and containerized personal information management (PIM) app for

Android and iOS that lets you isolate business email, calendars, and contacts from private data on the mobile device. Easily revoke business access based on device compliance rules. Sophos Secure Email lets you provision business email quickly, securely, and consistently across different device models and OS variations.

#### Highlights:

- ▶ Native email experience
- ▶ Containerized business email ideal for BYOD devices
- ▶ Easily and consistently configure secure email across different OS versions
- ▶ Anti-phishing technology protects users from malicious links hiding in emails or content
- ▶ Email attachments open within the secure container remain encrypted
- ▶ Control data leaving the container (e.g., restrict copy and paste, open with, etc.)

#### Sophos Secure Workspace

Sophos Secure Workspace is a containerized mobile content management app for iOS and Android that provides a secure way to manage,

distribute, and edit business documents and view web content. Edit Office format documents without leaving the container environment to ensure encrypted content remains secure. When managed by Sophos Mobile, admins can easily restrict access to content based on device compliance rules. In combination with Sophos SafeGuard Encryption, Sophos Secure Workspace provides seamless exchange of encrypted files – stored locally or in the cloud – between iOS, Android, Windows, and macOS users.

#### Highlights:

- ▶ Documents are stored securely with AES-256 encryption
- ▶ Distribute files to devices from the central admin interface
- ▶ Anti-phishing technology protects users from malicious links in documents
- ▶ View and edit text, PDF, compressed archives, and Office format documents
- ▶ Corporate Browser for secure access to intranets or corporate websites
- ▶ Access files from all leading cloud storage providers, including any WebDAV service
- ▶ Retrieve encryption and recovery keys from a Sophos SafeGuard encryption server (requires Sophos SafeGuard 8)
- ▶ Collaborate with password protected HTML5 files
- ▶ Secure Photo takes and stores photos encrypted
- ▶ Manage and store passwords securely using KeePass format

## Sophos Mobile Security

The Sophos Mobile Security app protects your Android devices without compromising performance or battery life. Powered by leading Sophos anti-malware technology, Sophos Mobile Security offers an award-winning level of antivirus and ransomware protection together with potentially unwanted app detection, privacy advisor, web protection, web filtering for unwanted content, and much more. Sophos Mobile Security monitors device health continuously to ensure that you are notified if a device is compromised, and can take remediating action or automatically revoke access to corporate resources. Additionally, Sophos Mobile Security for Android includes a Password Safe, Secure QR Code Scanner, and Authenticator for one-time passwords.

### Award-winning Android Security

Sophos Mobile Security has achieved a long and unbroken streak of perfect 100% protection scores in AV-TEST's comprehensive test of Android security apps. It was recognized with the **AV-TEST Best Android Security 2016** award, after receiving the **AV-TEST Best Protection** award in 2015.

### Highlights:

- Protection from malicious apps and websites, ransomware, spam, potentially unwanted apps (PUA), and low-reputation apps
- Web filtering for unwanted content
- Privacy Advisor
- Application whitelisting
- Secure QR code scanner
- Authenticator for one-time passwords
- Manage and store passwords securely using KeePass format
